Subject: ACW-2018-016 - L-47 - IR#1 - Revised Program and Statement for 1.4

Good morning

Please find attached a revised program for the zonal abandonment of the Keg River zone in the above noted wellbore.

Statement for IR#1 – 1.4 – it is unknown whether the economics in the future will warrant the reactivation of the Cameron Hills field. The well will either be abandoned or brought back on production within 6 years (Q1 2025). A permanent BP with 15 meters of circulated cement will be used by SOG to bring the wellbore into compliance. The rationale being if the well ends up being abandoned in the future, the zonal abandonment work is complete so a service rig will not be required. If the well ends up being reactivated, a service rig will be required regardless of the downhole suspension method.

Thanks

Ken N
