LEGEND

- Area of dolomitization, Slave Point Fm.
- Basement generated fault
- Depositional or erosional limit of stratigraphic unit prior to burial by overlying strata.
- Facies change.
- Paleotopographic highs which were not covered by upper Chinchaga sediments.
- Illustration 12
- Outline of individual Hydrocarbon Occurrence Model Illustration.
- Major anticline showing plunge and apex (Liam Plateau).
- Most prospective areas of possible Presquile dolomite development.
- Horn Plateau Formation reefal development (real extent uncertain).
- Limit of cover by younger rocks; generalized in areas of complex outcrop patterns.
- ◆ Significant oil recovery

For details of specific areas and/or additional stratigraphic information, see individual stratigraphic maps of the Middle Devonian Carbonate barrier.
