GEOLOGICAL AND ENGINEERING SUMMARY

Well Name: Briggs Northeast Rabbit Lake No. 1

Location: Latitude 61° 00' 34.11" N.
Longitude 118° 35' 09.06" W.

Briggs Northeast Rabbit Lake No. 1 is located eight miles northeast of Briggs Rabbit Lake No. 3 capped gas well and 6.5 miles north and slightly west of Briggs Foetus Lake No. 1 dry hole. The latter two wells are eight miles apart. The well was drilled into the top of the Precambrian at a total depth of 2,803 feet.

The top of the Middle Devonian Slave Point formation, at a depth of 2,404 feet, was found to be 85 feet lower structurally than expected. The top of the formation shows evidence of brecciation and recrystallization. The section from 2,490 feet to 2,530 feet is predominantly dark grey and dark green shale, which is not present in the Slave Point in the Foetus Lake and Rabbit Lake wells. The Presqu'ile formation equivalent is a dense, cream-coloured limestone with no apparent porosity. The top of the Pine Point formation was cored and tested and yielded 900 feet of salt water in a one-hour test of the interval 2,622 feet to 2,644 feet. The top of the Pine Point dolomite was tested, but yielded only ten feet of oil flecked mud in one hour. A core was taken in this formation, but no further testing appeared to be warranted.

After drilling into the Precambrian the well was logged, plugged and abandoned.
