AUTHORITY TO DRILL A WELL

APPLICATION

This application is submitted with Section 82 of the Canada Oil and Gas Drilling Regulations. When approved under Section 83 of the Regulations, it is the requisite authority for the commencement of drilling operations.

Well Name in Full: Conoco et al East Mackay I-55

Operator: Conoco Canada Limited — Drilling Program No.: N/A

Contractor: Atco/Equtak Drilling — Permit or Lease No.: EL 315 (formerly EA 233)

Drilling Rig or Unit: 76 — Estimated Well Cost: $3,200,000

Location-Unit: I — Section: 55 — Grid Area: 64°50', 125°30'

Coordinates: Lat.: North 64°44' 43.3084" — Long.: West 125°39' 44.0266"

Area: Fort Norman, N.W.T. — Field/Pool: Wildcat

Elevation-RT/KB: GR-253.6m KB-258m (ASL) — Seafloor: N/A (BRT)

Approx. Spud Date: January 8, 1988 — Estimated Days on Location: 35

Anticipated Total Depth: 2134m KB — Target Horizon(s): Hume, Bear Rock (Devonian)

UWI: 300I556450125300

EVALUATION PROGRAM

Ten-metre sample intervals: None

Five-metre sample intervals: 35m to TD

Canned sample intervals: ALL

Conventional cores at: Geologist's Discretion

Logs and Tests: DIFL-Sonic-SP-GR, CNL-LDT-GR-CAL-PE TD to 560m
VSP DST's may be run after logging

CASING AND CEMENTING PROGRAM

O.D	Weight	Grade	Setting Depth m KB Below Seafloor	Cementing Program (Volumes)
508mm	139.9 kg/m	H40,STC	0-35m	cement to surface (5.5 tonnes)
244.5mm	53.6 kg/m	K55,STC	0-560m	cement to surface (22 tonnes)
139.7mm	23.1 kg/m	K55,LTC	0-2000m	as required
139.7mm	25.3 kg/m	K55,LTC	2000-2134m	as required

B O P Equipment: Diverter on conductor while drilling surface hole
1 annular preventer - 21 mPa, 1 single gate preventer - 21 mPa, 2 single gate preventers - 34 mPa
1 choke manifold - 21 mPa

Other Information

Signed: [signature] — Title: Sr. Production Engineer

Date: January 4, 1988 — Company: Conoco Canada Limited

THIS SURVEY WAS EXECUTED DURING THE PERIOD OF
SEPTEMBER 25th TO DECEMBER 18th., A.D. 1987
BY AMBROSE J. WRZOSEK, C.L.S.
FOR CONOCO CANADA LIMITED

LEGEND

U.T.M. Coordinates are computed for Zone 10 (123° W. Longitude)
Bearings are astronomic, derived from Solar Observation, bearing 34°42'56" of the line between GSC Control Monument 789026 and placed Control Monument C1 and were confirmed by the bearing 305°15'20" on the line between placed monuments C4 and C3, derived from observation on Capella (∝ Aur) and are referred to 123° W. Long.
Distances shown in the traverse are measured distances, reduced to the horizontal at general ground level.

For the computation of coordinates, measured distances have been reduced to the UTM plan by multiplying them by an average combined factor. Co-ordinates for placed Control Monuments C1 and C2 were adjusted using the Compass Rule.

Geodetic Surveys of Canada (GSC) Control Monument found is shown thus ⊕
CLS '77 Post placed is shown thus ○
Traverse line is shown thus ———
Elevations were derived from GSC Monument 789026 and are Trigonometric.
CLS '77 Posts placed are marked with the appropriate Station numbers and the year, 1987.
All distances are check measured, in two independent operations.
Co-ordinates for Station 789026 were retrieved from the Geodetic Surveys of Canada Data Bank on September 24th. 1987.

I, Ambrose J. Wrzosek, of the City of Grande Prairie, in the Province of Alberta, Canada Lands Surveyor, make oath and say that I have, in my own proper person, according to law and the instructions of the Surveyor General of Canada Lands, faithfully and correctly executed the survey shown by this plan and field notes and that the said plan and field notes are correct and true to the best of my knowledge and belief.
SO HELP ME GOD.

SWORN before me at the City of Grande Prairie, in the Province of Alberta, this 22nd day of January, A.D. 1988.

Canada Lands Surveyor.

FINAL WELL REPORT

CONOCO ET AL EAST MACKAY I-55

Prepared by John Schneider

March, 1988

A. INTRODUCTION

1. Summary

The well Conoco et al East Mackay I-55 was spudded January 11, 1988 and reached a total depth of 2165m on February 13, 1988. This was an exploratory well to evaluate the Cretaceous and Devonian aged formations. The rig Atco/Equatak 76, a conventional land rig, was used to drill this well.

The only problems encountered during the drilling operations were minor lost circulation at 740m and deviations of 4° to 5° from 1200m to 1700m. The wireline logs showed no evidence of oil or gas so no DST's were run and the well was plugged and abandoned. The rig was released on February 17, 1988. A map showing the location of the well is attached.

B. GENERAL DATA

1. Well Name: Conoco et al East Mackay I-55
   Unit I, Section 55, Grid Area 64°50', 125°?0'

   Exploration Agreement: EL 315 (formerly EA 233)

2. Location: Geographic Coordinates - North 64°44' 43.3084"
   - West 125°39' 44.0266"

3. Unique Well Identifier: 300I556450125300

4. Operator and Drilling Contractor:

Operator	Drilling Contractor
Conoco Canada Limited 3900, 205 - 5th Avenue S.W. Calgary, Alberta T2P 2V7	Atco/Equatak Drilling Ltd. 700, 800 - 6th Avenue S.W. Calgary, Alberta T2P 3G3

5. Drilling Unit: Atco/Equatak rig 76

6. Difficulties and Delays: None

C. SUMMARY OF DRILLING OPERATIONS

1. Elevations: KB - 259.8 m GR - 253.6 m

2. Total Depth: Driller - 2165 mKB Logger 2161.4 mKB

3. Date and Hour Spudded: 88-01-11 at 1100 hours

4. Date Drilling Completed: 88-02-13 at 0615 hours

5. Date of Rig Release: 88-02-17 at 1800 hours

6. Well Status: Abandoned

7. Hole Sizes and Depths:

Bit Size	Interval
660 mm	0 - 35 m
311 mm	35 - 560 m
222 mm	560 - 2165 m

8. Casing and Cementation Record: See Table 1

9. Sidetracked Hole: None

10. Drilling Fluid: See Table 2

11. Fishing Operations: None

12. Well Kicks: None

13. Formation Integrity Tests:

Depth	Fluid Density (kg/m^3)	Applied Pressure (kPa)	EMW (kg/m^3)	Last Casing Depth

CONOCO ET AL EAST MACKAY I-55
WELL DATA SUMMARY

OPERATOR:	CONOCO CANADA LIMITED
WELL NAME:	Conoco et al East Mackay I-55
WELL LOCATION:	I-55-64-50-125-30 (Northwest Territories, Canada)
COORDINATES:	64°44'43.3084" N lat., 125°39'44.0266" W long.
ELEVATIONS:	Ground: 253.60m Kelly Bushing: 259.80m
TOTAL DEPTH:	Drillers: 2165m 12 Feb/88, 06:20 hrs, Bear Rock FM Loggers: 2161.4m
SPUD DATE:	11 January, 1988, 10:00 hrs, Summit Creek? Formation
RIG RELEASE:	
CONTRACTOR:	Atco Equtak Drilling Division, Rig No. 76 (2600m)
SUPERVISION:	Drilling: R. Jones/A. Duperron Geological: K. Koke
LICENCE NUMBER:	DA 1377 (lease #EL 315, formerly lease #EA 233)
AFE NUMBER:	5B-20-0209
SAMPLE STUDY:	5 meter samples 35m to TD, total gas and chromatography 35m to TD.
HOLE SIZE:	Conductor Hole: 660mm Surface Hole: 311mm Main Hole: 222mm
CASING RECORD:	Conductor: 508mm 139.9kg/m H-40 landed @ 35m KB 12 Tonnes permafrost cement, good returns. Surface: 244.5mm 53.7kg/m K-55 landed @ 556m KB Lead 15,4 tonnes permafrost cement, Tail 21 tonnes G (0-1-0) 2% $CaCl_2$ Good returns.

CONOCO ET AL EAST MACKAY I-55
GEOLOGICAL SUMMARY

The Conoco et al East Mackay I55 well was drilled in early 1988 to evaluate a Devonian seismic rollover observed on a downthrown fault block near Mackay Ridge. Although some reservior quality rock was observed (especially in the sands of the Little Bear), no oil stain or gas detector anomalies were recorded during the drilling of this well. Sample evaluation was complicated by the presence of from 10 to 80% cavings in the cuttings. Drilling with flocculated water and high water loss mud combined with hole deviations of up to nearly 6 degrees exacerbated this cavings problem. During the last few drilling days, mud viscosities of up to 110 seconds per liter were required to prevent Devonian shales from sloughing. Viscosities of this magnitude can severely suppress gas detector response. Unfortunately, the Hume and Bear Rock Formations (primary and secondary objectives, respectively) contained little or no porosity and displayed no gas or oil shows.

SUMMARY OF FORMATIONS

SUMMIT CREEK?/EAST FORK FORMATIONS - Surface

A unique sequence of grey-green, grey, and medium brown very fine to medium grained glauconitic sandstones may be the equivalent of the Maastrichtian/Paleocene Summit Creek Formation. They are subangular, poorly sorted, argillaceous, and have poor porosity with no shows. Underlying this arenaceous package (at a depth of about 90m in the I-55 well) is the Cretaceous marine East Fork Formation, primarily composed of medium to light grey unconsolidated shale and clay stone. There are numerous bentonitic stringers, arenaceous forams, and beds of light to medium grey siltstone and sandstone in the lower half of this shale. Although some of these sands are unconsolidated in samples,

there was no evidence of reservoir grade porosity or hydrocarbon shows in this unit.

LITTLE BEAR FORMATION 691m

The Little Bear in the I-55 well is a mainly non-marine Cretaceous package composed of sandstone, siltstone, shale, and minor coal, interbedded. The sands are predominant and are mostly unconsolidated, especially near the top. The uppermost 15 to 20m of beds is a conglomeratic sandstone; medium grey to brown, fine to medium grained, abundant varicolored chert pebbles, subangular to subrounded, medium to well sorted, unconsolidated in samples, good porosity, no shows. This rock is undoubted of reservoir quality, and may be prospective where there is closure on the formation. A basal sandstone is also present in the I-55 well, apparently also without closure. Hydrocarbon shows were absent throughout.

SLATER RIVER FORMATION 1072m

This marine sequence of medium to dark grey shales is Lower Cretaceous in age. Although it encloses many stringers of medium to light grey very fine to fine grained sandstone and siltstone, no significant porosity was seen. The importance of this formation is related to the presence of about 45m of black bituminous shales near t· base. This material showed increaced gas readings of up to 40 units background. The presence of significant propanes and butanes indicates that this shale could be a source rock to a suitable closed reservoir. A few meters of non-bituminous shales and siltstones below the bituminous beds may be equivalent to the Cretaceous "Sans Sault" rocks found to the North.

CONOCO ET AL EAST MACKAY I-55
SUMMARY OF FORMATIONS

DETRITAL CHERT ZONE 1383m

In the I-55 well, about 50m of beds containing abundant tan chert directly overly the pre-Cretaceous/post-Devonian unconformity. Plastic black shales showing slickensides enclose boulders and grains of tan to white chert, tan dolomite, brown limestone, grey-green siltstone, and black bituminous shale. This package can be interpreted as Lower Cretaceous detrital beds derived from the erosion of Devonian and Ordovician rocks exposed on pre-Cretaceous highs. A possible source is the Franklin Mountain cherty beds penetrated directly below the Slater River Formation in the CANDEL DECKMG et al EAST MACKAY B-45 well. No porosity or hydrocarbon shows were noted in this zone.

IMPERIAL FORMATION 1421m (Profound unconformity)

In the I-55 well the Devonian Imperial Formation consists of an upper unit of medium grey-green calcareous siltstone overlying a much thinner package of grey-green non-calcareous shale. The Jungle Ridge limestone lentil appears to be removed by erosion in this area. Siltstone is the dominant lithology here, comprising the top 300m or so (about 80%) of the formation. The anomalously high silt content may be due to proximity to areas of high relief during Devonian time. This Formation appears to have no economic potential in the I-55 well.

CANOL FORMATION 1792m

In the I-55 well, the Canol consists of 130m of dark grey-brown to black, brittle, calcareous and siliceous organic rich shales. Gas background increased to the 20 to 40 unit range with abundant butanes and propanes. This Devonian marine shale can be considered a potential source rock to closed reservoirs in the region.

CONOCO ET AL EAST MACKAY I-55
SUMMARY OF FORMATIONS

HUME FORMATION 1922m

The primary objective of the I-55 well, the Hume consists herein of an upper zone of relatively clean bioclastic fossiliferous limestone underlain by a more argillaceous package of interbedded medium to dark brown or grey limestone, light to dark grey-brown marl, and light grey-green to black very calcareous shale. It was hoped that tectonic fracturing of the upper clean limestone unit combined with closure would create a commercial reservoir. In the I-55 well, however, neither significant porosity nor hydrocarbon shows were recorded.

BEAR ROCK FORMATION 2119m

The secondary objective of the I-55 well, the Devonian Bear Rock Formation is herein composed of tan to light grey microcrystalline calcareous dolomite and light grey and tan to medium brown microcrystalline dolomitic limestone. The presence of white to yellow-brown chalky calcareous aggregates at about 2150m may indicate the presence of interbedded anhydrite below this point. It is difficult in samples to determine the exact relationship between limestone and dolomite in the upper Bear Rock, but outcrop data indicates that the material is a brecciated dolomite with a matrix of microcrystalline dolomitic limestone. Although considerable porosity is present in the Bear Rock in some localities, no significant porosity or hydrocarbon shows were noted in the I-55 well.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

0-35m		Samples Missed. Drill conductor hole.
35-40	90%	Sandstone: medium grey-green, very fine to medium grained, poor sorting, subangular, frosted quartz, dark grey chert, glauconite, minor pink to clear feldspar, abundant mica, very argillaceous, friable, poor porosity to tight, no shows.
	10	Casing cement.
40-45	60	Sandstone: as above, poor porosity to tight, no shows.
	35	Shale: medium grey, sandy to silty, carbonaceous in part, blocky to earthy.
	5	Casing cement.
45-50	70	Sandstone: generally as above, most mediumn grey, friable, poor porosity to tight, no shows.
	30	Shale: as above.
50-55	60	Shale: as above, most very silty.
	35	Sandstone: as abovef, poor porosity to tight, no shows.
	5	Casing Cement.
55-60	70	Shale: medium grey to minor medium brown, blocky, earthy, silty, micaceous.
	30	Sandstone: medium grey-green, some medium brown, very fine (mostly) to medium grained, poor sorting, subangular, light to dark grey chert, frosted quartz, pink to clear feldspar, abundant mica, argillaceous, friable, poor porosity to tight, no shows.
60-65	85	Shale: as above, carbonaceous in part.
	15	Sandstone: as above, poor porosity to tight, no shows.
65-70	60	Shale: as above, grading to clay, most washes away.
	40	Sandstone: generally as above, very abundant black chert, some calcareous cement, poor porosity to tight, no shows.
70-75	50	Sandstone: medium grey to medium brown, very fine to fine grained, poor sorting, subangular, dark grey to dark brown chert, minor clear quartz, mica, very argillaceous, friable to hard, clay and minor calcareous cement, poor porosity to tight, no shows.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

70-75m		Continued from previous page.
	50%	Shale: medium grey to medium brown, blocky, commonly silty to sandy, carbonaceous in part, some slightly calcareous.
75-80	85	Shale: as above, most medium brown.
	15	Sandstone: as above, becoming very argillaceous, tight, no shows.
80-85	90	Shale: as above, some medium brown, commonly silty.
	10	Sandstone: as above, grading to argillaceous siltstone, tight, no shows.
85-90	65	Shale: medium grey to medium brown, earthy to blocky, most silty and sandy, carbonaceous in part.
	30	Sandstone: medium grey, very fine to medium grained, poor sorting, subangular, light to dark grey chert, frosted quartz, minor mica, carbonaceous in part, clay and calcareous cement, most argillaceous, friable, poor porosity to tight, no shows.
	5	Casing cement.
90-95	90	Shale: as above.
	10	Sandstone: as above, poor porosity to tight, no shows, caving in part.
95-100	98	Shale: as above, grading to unconsolidated mud.
	2	Sandstone: as above, tight, no shows, cavings.
100-105	95	Shale: as above.
	5	Cavings: medium grey sandstone.
105-110	85	Shale: medium grey, soft, earthy, grading to clay, minor micromicaceous, minor silty or sandy, abundant carbonaceous flakes, a few medium brown calcareous nodules.
	15	Sandstone: medium grey, very fine to fine grained, poor sorting, subangular, light grey to black chert, frosted quartz, argillaceous, clay cement, friable, most unconsolidated in samples, poor? porosity, no shows.
110-115	95	Shale: as above.
	5	Sandstone: generally as above, unconsolidated, minor dark grey chert pebbles, poor porosity?, no shows.

985-990	60	Siltstone: medium grey, argillaceous, sandy, carbonaceous, grading in part to very fine grained sandstone, tight, no shows.
	25	Shale: medium to light grey, blocky to earthy, silty, Inoceramus prisms.
	15	Sandstone: medium grey, very fine to fine grained, poor sorting, subangular, silty to argillaceous, clay with minor calcareous cement, poor porosity to tight, no shows.
990-995	45	Siltstone: as above.
	30	Sandstone: as above, poor porosity, no shows.
	25	Shale: as above, some light brown sideritic nodules.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

995-1000m	50%	Siltstone: as above.
	25	Sandstone: as above, poor porosity, no shows, abundant fine grained unconsolidated chert/quartz sand, good? porosity, no shows.
	25	Shale: as above.
1000-1005	50	Siltstone: as above, very sandy.
	30	Shale: as above, very silty.
	20	Sandstone: as above, very fine to fine grained, poor sorting, subangular, poor? to fair? porosity, unconsolidated in part, no shows.
1005-1010	40	Siltstone: medium grey, argillaceous, carbonaceous, calcareous, sandy, grading to sandstone, trace floating yellow to brown chert pebbles.
	30	Sandstone: medium grey, very fine grained, poor sorting, subangular, silty, carbonaceous, argillaceous, calcareous and siliceous cements, tight, no shows.
	30	Shale: medium grey, micromicaceous in part, carbonaceous in part, medium brown sideritic nodules.
1010-1015	40	Sandstone: as above, some floating chert pebbles, poor porosity, no shows.
	30	Siltstone: as above.
	30	Shale: as above.
1015-1020	35	Siltstone: as above, very sandy.
	40	Shale: as above, very silty.
	20	Sandstone: generally as above, some to fine grained, poor porosity to tight, no shows.
	5	Bit metal.
1020-1025	45	Siltstone: as above, grading to sandstone, tight, no shows.
	30	Shale: as above.
	25	Sandstone: generally as above, some to fine grained, poor porosity to tight, no shows.
1025-1030	60	Siltstone: medium grey-brown, argillaceous to clean, sandy, grading in part to very fine grained sandstone, tight, no shows.
	40	Shale: medium grey, silty to sandy, blocky to earthy, minor medium brown sideritic nodules.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

1030-1035m	70%	Shale: as above, most very silty.
	30	Siltstone: as above.
1035-1040	50	Sandstone: light grey, fine grained, well sorted, subangular, frosted quartz with minor grey to black chert, unconsolidated in sample, good? porosity, no shows.
	25	Siltstone: as above.
	25	Shale: as above.
1040-1045	80	Shale: dark grey, earthy to blocky, firm, minor medium brown sideritic nodules, commonly silty.
	20	Siltstone: medium to dark grey, argillaceous in part, most sandy.

BASAL LITTLE BEAR SAND 1046m

1045-1050	85	Sandstone: light grey, fine grained, well sorted, subangular, friable, clear quartz with minor white, light to medium grey chert, rare chert overgrowth cement, unconsolidated, good porosity, no shows.
	15	Shale: as above.
1050-1055	85	Sandstone: as above, but most medium grained, well sorted, friable, subangular, most unconsolidated, good porosity, no shows.
	15	Shale: medium grey-brown, waxy, bituminous, carbonaceous, abundant slickensides.
1055-1060	90	Sandstone: generally as above, most fine to medium grained, well sorted, subangular, friable, unconsolidated, good porosity, no shows.
	10	Shale: as above, becoming silty.
1060-1065	90	Sandstone: light grey, fine grained, well sorted, subangular, clear quartz with minor light to dark grey chert, silica overgrowth cement, good porosity, no shows.
	10	Shale: medium to dark grey, grey-brown, rare grey-green, micromicaceous in part, some silty, some waxy with slickensides, bituminous in part, grey-green type may be bentonitic.
1065-1070	65	Sandstone: as above, good porosity, no shows.
	20	Shael: as above, trace tan sideritic stringers, carbonaceous.
	15	Siltstone: medium grey, sandy, argillaceous, carbonaceous in part, very slightly calcareous.

CONOCO ET AL EAST MACKAY I-55
SAMPLE DESCRIPTIONS

SLATER RIVER 1072m

1070-1075m	55%	Sandstone: as above, good porosity, no shows, mostly unconsolidated sand cavings.
	25	Shale: as above, some bentonitic, some slickensides.
	20	Siltstone: as above, very sandy, grading to very fine grained sandstone, tight, no shows.
1075-1080	70	Shale: medium to dark grey, earthy to blocky, slightly carbonaceous in part, some silty, minor medium brown sideritic nodules.
	15	Siltstone: medium grey, argillaceous, carbonaceous, sandy, grading in part to very fine grained sandstone, tight, no shows.
	15	Cavings: mostly unconsolidated fine grained sand, likely cavings, some may be floating in siltstone or shale, bit metal.
1080-1085	75	Shale: as above, Inoceramus prisms, one calcareous foram.
	20	Siltstone: as above.
	5	Cavings: as above.
1085-1090	70	Shale: as above, Inoceramus prisms.
	30	Siltstone: as above, some very sandy.
	tr	Shale: medium grey-green, waxy, bentonitic.
1090-1095	50	Shale: medium to dark grey, blocky, most silty, some medium brown sideritic nodules.
	25	Sandstone: medium grey, fine to very fine grained, medium sorting, subangular, frosted quartz, dark chert, silty in part, most unconsolidated in sample, may have siltstone or argillaceous matrix, tight?, no shows.
	25	Siltstone: medium grey, argillaceous, sandy.
	tr	Shale: medium to dark grey, blocky, most silty, some medium brown sideritic nodules.
1095-1100	60	Shale: as above, Inoceramus fragments, ironstone nodules.
	30	Siltstone: as above, grading to tight very fine grained sandstone, tight,no shows.
	10	Sandstone: generally as above, becoming well indurated with silica cement, poor porosity to tight, no shows.
	tr	Shale: grey-green type as above with slickensides.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

1100-1105m	45%	Shale: medium to dark grey, blocky to micromica-ceous, silty to sandy, carbonaceous in part, trace Inoceramus prisms.
	40	Siltstone: medium grey, argillaceous to clean, sandy.
	10	Sandstone: light grey, very fine to fine grained, medium sorted, subangular, frosted quartz with dark chert, silty in part, clay cement, poor porosity to tight, no shows.

	35	Limestone: light grey to medium grey, buff to light brown, microcrystalline, argillaceous, some slightly silty, framework 10%, thin bedded, tight, no shows.
	15	Marl: light to dark grey-brown, calcareous, blocky, silty in part, common brachiopod fragments.
	10	Cavings: black bituminous shale.
2015-2020	Sample missed (stuck for 5 hours).	
2020-2025	15	Limestone: as above, becoming very argillaceous, tight, no shows.
	15	Shale: as above.
	5	Marl: as above.
	65	Cavings: black bituminous Canol shale, grey-green non-calcareous Imperial shale.
2025-2030	20	Shale: as above.
	10	Limestone: as above, very argillaceous, tight, no shows.
	10	Marl: as above.
	60	Cavings: as above, mostly grey-green non-calcareous shale.
2030-2035	25	Limestone: buff to light brown, medium to dark brown mottled, microcrystalline, argillaceous to rarely clean, minor pellets, ostracods, and crinoid fragments, framework 10-20%, thin bedded, tight, no shows.
	10	Marl: medium grey to medium brown, calcareous, blocky, grading to argillaceous limestone.
	10	Shale: medium grey-green, micromicaceous, calcareous.
	55	Cavings: grey-green non-calcareous shale and siltstone, black to dark brown bituminous shale.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

2035-2040m	35%	Limestone: generally as above, framework 30%, most clean, tight, no shows.
	20	Shale: as above.
	10	Marl: as above.
	35	Cavings: as above.
2040-2045	30	Limestone: as above, very argillaceous, common crinoids, framework 30%, tight, no shows.
	20	Marl: as above, some silty.
	20	Shale: as above.
	30	Cavings: as above.
2045-2050	25	Limestone: buff to light grey, medium to dark brown mottled, microcrystalline, argillaceous, thin bedded, minor brachiopods, crinoids, framework 20%, tight, no shows.
	25	Marl: light to medium grey or brown, calcareous, blocky, some silty, grading to argillaceous limestone, brachiopods.
	25	Shale: medium grey-green, micromicaceous, calcareous.
	25	Cavings: dark grey toblack and medium grey-green non-calcareous shale.
2050-2055	45	Limestone: as above, thin bedded, argillaceous to clean, minor crinoids, brachiopods, framework 10-20%, tight, no shows.
	25	Shale: as above.
	20	Marl: as above.
	10	Cavings: as above.
2055-2060	40	Shale: as above, and some medium to dark grey, micromicaceous, calcareous, flaky.
	30	Marl: as above.
	25	Limestone: as above, thin stringers, framework 10%, tight, no shows.
	5	Cavings: as above.
2060-2065	55	Shale: medium grey-green, dark brown -grey, micromicaceous in part, flaky to blocky, very calcareous, some slightly bituminous.
	15	Limestone: buff to dark brown, microcrystalline, argillaceous, rare crinoid fragments, framework 10%, thin stringers, tight, no shows.
	15	Marl: medium grey to grey-green, calcareous, blocky, grading in part to argillaceous limestone.
	15	Cavings: dark grey to black, grey-green non-calcareous shale, common slickensides.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

2065-2070m	20%	Marl: as above, some silty?
	15	Limestone: as above, thin stringers, tight, no shows.
	50	Shale: as above, and some black, flaky, non-calcareous, bituminous.
	15	Cavings: as above.
2070-2075	45	Shale: as above, some silty.
	25	Limestone: as above, argillaceous to clean, tight, no shows.
	20	Marl: as above, silty in part.
	10	Cavings: as above.
2075-2080	50	Shale: medium grey-green, some dark grey-brown to black, micromicaceous, calcareous, some slightly silty.
	25	Limestone: buff, light to medium grey-brown, microcrystalline, argillaceous to minor clean, rare scattered fossil fragments, framework 10-20%, thin bedded, tight, no shows.
	20	Marl: medium grey-green to grey-brown, calcareous, blocky, grading to argillaceous limestone.
	5	Cavings: grey-green to black non-calcareous shales.
2080-2085	50	Limestone: as above, clean to argillaceous, most thin bedded, minro bioclastic stringers, tight, no shows.
	25	Shale: as above.
	20	Marl: as above.
	5	Cavings: as above.
2085-2090	70	Limestone: as above, most argillaceous, thin bedded, framework 20-30%, tight, no shows.
	15	Marl: as above, some slightly silty.
	15	Shale: as above, cavings in part?
	tr	Cavings: as above.
2090-2095	70	Limestone: buff to light brown, some dark brown mottled, most microcrystalline, minor stringers of crinoids, brachiopod fragments, pellets, stromatoporoid? fragments, massive? to thin bedded, tight, no shows.
	15	Shale: dark brown to black, some grey-green, calcareous, blocky, grading to marl.
	15	Marl: medium brown to medium grey, calcareous, brachiopods, blocky, grading to calcareous shale.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

2095-2100m	75%	Limestone: as above, clean to argillaceous, minor stringers of pellets or oolites?, tight, no shows.
	15	Shale: as above.
	10	Marl: as above.
2100-2105	50	Limestone: generally as above, becoming very argillaceous, framework 10-20%, tight, no shows.
	35	Marl: as above.
	10	Shale: as above.
	5	Cavings: non-calcareous grey-green to black shale.
2105-2110	45	Shale: medium to dark grey-brown, black, micromicaceous, very calcareous, grading to marl.
	30	Marl: medium to dark grey-brown, calcareous, blocky, grading to argillaceous limestone.
	20	Limestone: light grey, light to dark brown, microcrystalline to cryptocrystalline, argillaceous, bioclastic in part with crinoids, brachiopods, pellets, framework 40%, thin bedded, tight, no shows.
	5	Cavings: grey-green to boack non-calcareous shale.
2110-2115	45	Marl: as above.
	30	Limestone: as above, most dark colored, very argillaceous, framework 20%, tight, no shows.
	20	Shale: as above.
	5	Cavings: as above.

BEAR ROCK DOLOMITE 2119m

2115-2120	40	Limestone: as above, most dark colored, framework 10-20%, very argillaceous, tight, no shows.
	30	Marl: asa bove.
	25	Shale: as above.
	5	Cavings: as above.
2120-2125	35	Dolomite: tan to light grey, microcrystalline, calcareous, some chalky, grading in part to dolomitic limestone, thin bedded, generally tight, trace poor pinpoint porosity, no shows.
	30	Limestone: as above, tight, no shows.
	20	Marl: as above, cavings.
	15	Shale: as above, mostly cavings.
2125-2130	35	Limestone: tan, light grey, medium to dark brown, microcrystalline, dolomitic, slightly argillaceous in part, grading to calcareous dolomite in part,

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

2125-2130m		Continued from previous page.
		thin bedded?, or brecciated dolomite with matrix of dolomitic limestone?, tight, no shows.
	25	Dolomite: buff to medium brown, microcrystalline to trace very fine crystalline, some very calcareous, thin bedded? or brecciated?, tight, no shows.
	40	Cavings: calcareous grey to brown shale and marl, grey-green shale, brown limestone.
2130-2135	50	Limestone: as above, most tan, very dolomitic, tight, no shows.
	40	Dolomite: as above, tight, no shows.
	10	Cavings: as above.
2135-2140	65	Dolomite: as above, very calcareous, tight, no shows.
	20	Limestone: as above, slightly argillaceous in part, cavings in part?, tight, no shows.
	15	Cavings: as above.
2140-2145	75	Dolomite: tan, light grey-brown, light grey, microcrystalline to minor very fine crystalline, very calcareous, grading in part to dolomitic limestone, slightly anhydritic?, thin bedded? or brecciated?, tight, no shows.
	10	Limestone: tan to light grey, microcrystalline, dolomitic, thin bedded, tight, no shows.
	15	Cavings: grey-green to black calcareous shale, brown marl and limestone.

BEAR ROCK "ANHYDRITE" ZONE 2150m

2145-2150	80	Dolomite: generally as above, commonly very calcareous, anhydritic?, some fractures filled with sparry calcite, thin bedded or brecciated, tight, no shows.
	10	Limestone: as above, very dolomitic, tight, no shows.
	tr	Anhydrite: white chalky aggregates of calcium carbonate formed by reaction of anhydrite with treated mud?, NOTE: anhydrite not actually seen, inferred only by slow drilling times and these chalky aggregates.
	10	Cavings: as above.

CONOCO ET AL EAST MACKAY I-55

SAMPLE DESCRIPTIONS

2150-2155m	60%	Dolomite: as above, very calcareous, slightly anhydritic in part?, tight, no shows.
	25	Limestone: as above, very dolomitic, tight, no shows.
	tr	Anhydrite?: as above, turned to chalk by reaction with treated mud.
	15	Cavings: as above.
2155-2160	50	Dolomite: as above, some very anhyldritic?, trace brown chert, brecciated? textures, tight, no shows.
	40	Limestone: light brown to dark grey, microcrystalline, argillaceous in part, anhydritic?, dolomitic, brecciated?, tight, no shows.
	tr	Anhydrite?: inferred only from presence of a few chalky white calcite aggregates possibly formed by reaction of anhydrite with treated mud.
	10	Cavings: as above.
2160-2165	30	Dolomite: tan to medium brown, microcrystalline to rarely very fine crystalline, calcareous, anhydritic?, thin bedded and brecciated, tight, no shows.
	30	Limestone: tan to dark brown, microcrystalline, argillaceous in part, slightly anhydritic in part, very dolomitic, brecciated textures?, tight, no shows.
	tr	Anhydrite?: white amorphous calcareous aggregates, some have yellow to brown concentric reaction rims, possibly products of reaction of anhydrite with treated mud.
	40	Cavings: brown limestone, grey to grey-green calcareous shale and marl.

WELL TERMINATION RECORD

This record is submitted in triplicate in compliance with Section 184 of the Canada Oil and Gas Drilling Regulations.

WELL DATA

Well Name: Conoco et al East Mackay I-55 Area: Fort Norman

Grid Area: 64-50-125-30 Field/Pool: Wildcat

Permit or Lease No.: EL 315 Final Coordinates: Lat.: N64°44' 43.3084" Long: W 125°39' 44.0266"

Drilling Unit: Atco/Equatak 76 Elevations-RT/KB: 259.8 m SF/GL: 253.6 m

Spud Date: 1988 01 11 Rig Released: 1988 02 17 Total Depth: 2165 mKB

CASING AND CEMENTING

O.D.:	Weight:	Grade:	Depth Set:	Cement and Additives:
508 mm	139.9 kg/m	H40	35m	12 tonnes permafrost
244.5 mm	53.6 kg/m	K55	556mKB	15.4 tonnes permafrost and 21 tonnes class G + 2% CaCl2

PLUGGING PROGRAM

Approval of the following program was obtained by (person) John Schneider from (person) Kem Singh of the Canada Oil and Gas Lands Administration by means of verbal approval on February 15 1988.

Type of Plug:	Interval:	Felt:	Cement and Additives:
#1	2165-2065m	no	6 tonnes 0:1:0 class G
#2	760-660 m	9000daN	13 tonnes 0:1:0 class G
#3	570-540 m	9000daN	5 tonnes 0:1:0 class G
#4	surface	no	1.2 tonnes 0:1:0 class G

Lost Circulation/Overpressure Zones: Lost circulation at 740 m

Equipment left on Seafloor (Describe): None

Provision for Re-entry (Describe and attach sketch): None

Cores: Type: None Intervals:

Other Downhole Completion/Suspension Equipment: None

CERTIFICATION

I certify on the basis of personal knowledge of operations undertaken at the above named well that the above information is accurate.

Signed: J.C. Schneider P. Eng. Title: Sr. Production Engineer

VERTICAL SEISMIC PROFILE

Company: CONCCO CANADA LIMITED

Well Name: EAST MACKAY I-55

Field: WILDCAT

Location: North: 64 44 43.3084 N
West: 125 39 44.0266 W

Province: N.W.T.

ELEVATIONS DATA:

Permanent Datum: GL — Elevations Measured In: METRES

Seismic Reference Datum (SRD): 500 METRES A.S.L — SRD Elevation: 500.00

Logs Measured From: KB — Drilling Measured From: KB — Water/Mud Line Depth:

Kelly Bushing (KB): 250.80 — Drill Floor (DF): 250.5 — Ground Level (GL): 253.60

ACQUISITION DATA:

Run Number:	1
Date:	15-FEB-1988
Total Depth:	2165 M
Bit Size:	222 MM
Casing Size:	244.5 MM
Tool Type:	SAT
Source Type:	1KG GEOGEL
Engineer:	DOWNEY
Witness:	SCHNEIDER
CSU Software:	30.4
Logging Unit:	243
District:	EDMONTON

1 KG GEOGEL CHARGES - AVG AZIMUTH 61, AVG DISTANCE 72 M
13 M WATER FILLED SHOT HOLES - SURFACE ELEV 253.6 M

PROCESSING DATA:

Processing Job Reference: 87898 — Processing Date: 29-FEB-1988

Log Analyst: D.E. KONARSKI — Processing Software Baseline: 16.6X1

VERTICAL VSP PROCESSING

1D COMPONENT ONLY

PROCESSING SEQUEN

RAW STACKS

Median stacking of the shots from the vert
after manual selection

PREPROCESSED Z STACKS

INPUT : RAW Z STACKS
BAND PASS FILTER: 5-120 hertz, zero phas
18-36 db/octave
NORMALIZATION : Amplitudes at each level
RMS value in a window of 1
40 milliseconds before P ar
GAIN FUNCTION : T**1.7
NO STATIC SHIFT : NONE

VELOCITY FILTER : WAVEFIELD

MEDIAN P DOWNGOING

INPUT : PREPROCESSED Z STACKS
MEDIAN FILTER :
11 level median filter to enhance downgoing, after fre
of downgoing waves steered by first P arrival times
BAND PASS FILTER: 6-100 hertz, zero phase
18-36 db/octave

PREPROCESSED STACKS MINUS DOWNGO

The median P downgoing waves are subtracted from t
to create a difference file.
A An F-K filter was applied to the difference file t
up-going shear mode conversions.

MEDIAN UPGOING

INPUT : PREPROCESSED Z STACKS r
MEDIAN FILTER :
7 levels median filter to enhance upgoing after freque
of upgoing waves along a slope of -1.0 the first P arr
BAND PASS FILTER: 6-100 hertz, zero phase
18-36 db/octave

WAVESHAPING

INPUT : MEDIAN P DOWNGOING and
WIENER FILTER : A Wiener filter designed
LEVEL is applied to both th
MEDIAN UPGOING
Input : 2000 msec of downgoing, starting
Desired ouput : Impulse response of a sixth ord
Butterworth filter 6-75 hertz
Lags of desired output : 1000 msec
Filter duration : 1000 msec
White noise : 0.01
BAND PASS FILTER: 5-120 hertz, zero phase
18-36 db/octave
OUTPUTS : WAVESHAPED DOWNGOING
Mute of waveshaped upgoing to the first arrival tre

CORRIDOR STACKS

INPUT : WAVESHAPED UPGOING
WINDOW : A 100 msec window was us
OUTPUTS : Summed corridor stack

EQUENCE

m the vertical component

EXPLANATION OF PANELS

1. RAW STACKS

2. PREPROCESSED Z STACKS

3. MEDIAN P DOWNGOING

4. PREPROCESSED STACKS MINUS P DOWNGOING

5. PREPROCESSED STACKS MINUS P DOWNGOING
   After F-K filter

6. MEDIAN UPGOING
   An increase of acoustic impedance appears as the reverse of the MEDIAN P DOWNGOING

7. MEDIAN UPGOING
   An increase of acoustic impedance appears the same as the MEDIAN P DOWNGOING

8. WAVE SHAPED DOWNGOING

9. WAVE SHAPED UPGOING
   An increase of acoustic impedance appears as the reverse of the WAVESHAPED DOWNGOING

10. SUMMED CORRIDOR STACK
    An increase of acoustic impedance appears as the reverse of the WAVESHAPED DOWNGOING

11. WAVE SHAPED UPGOING
    An increase of acoustic impedance appears the same as the WAVESHAPED DOWNGOING

12. SUMMED CORRIDOR STACK
    An increase of acoustic impedance appears the same as the WAVESHAPED DOWNGOING

1. RAW STACKS

2. PREPROCESSED Z STAC
