TYPE OF OPERATION

To work over the well to perforate, stimulate and evaluate additional Sulphur Point Dolomite oil pay. If Sulphur Point Dolomite proves unproductive, to then perforate, stimulate and evaluate the Sulphur Point Limestone for gas production potential.

SUMMARY OF PROPOSED OPERATIONS

(See the attached detailed workover program)

Pull production tubing.

Perforate additional Sulphur Point Dolomite interval.

Stimulate the lower Sulphur Point Dolomite.

Swab/flow the Sulphur Point dolomite on cleanup.

If Sulphur Point Dolomite is not productive, set bridge plug to isolate Sulphur Point dolomite, perforate, stimulate and evaluate the Sulphur Point Limestone.

Re-run production tubing as required.

Remove the BOP's and re-install the upper section of the wellhead.

Test the well as required.
