**RE: OROGO Final Operations Report – Cameron J-04 – OA-2018-003-SOG**

As you are aware, on January 28, 2020 (the “**Receivership Date**”), the Court of Queen’s Bench of Alberta (the “**Court**”) granted an Order pursuant to section 243 of the Bankruptcy and Insolvency Act, RSC 1985, c. B-3 and section 13(2) of the Judicature Act, RSA 2000, c. J-2, whereby Alvarez and Marsal Canada Inc. (the “**NWT Receiver**”) was appointed Receiver, without security, of all of the current and future assets, undertakings and properties of Strategic Oil and Gas Ltd. and Strategic Transmission Ltd. (collectively, “**Strategic**” or the “**Company**”) situated in the Northwest Territories (the “**NWT Property**”). For further information on the Receivership proceedings, please visit the NWT Receiver’s website at: [www.alvarezandmarsal.com/sog](http://www.alvarezandmarsal.com/sog).

The NWT Receiver, the Government of the Northwest Territories and ELM Inc. (“**ELM**”) entered into an abandonment agreement for the purposes of completing the abandonment work required by the office of the Regulator of Oil and Gas Operations (“**OROGO**”).

The NWT Receiver respectfully endorses the submission made by ELM to OROGO for the purposes of this final operations report.

Should you have any questions or require further information, please contact the undersigned at [dmacrae@alvarezandmarsal.com](mailto:dmacrae@alvarezandmarsal.com).

Yours truly,

**Alvarez & Marsal Canada Inc., in its capacity as Receiver of  
Strategic Oil & Gas Ltd. and Strategic Transmission Ltd.’s NWT Properties  
and not in its personal or corporate capacity**

cc: Christopher Gagnon [Christopher@elminc.ca](mailto:Christopher@elminc.ca)

April 17, 2023

**Office of the Regulator of Oil and Gas Operations**  
PO Box 1320  
Yellowknife NT, X1A 2L9

By Email: [orogo@gov.nt.ca](mailto:orogo@gov.nt.ca)

**RE: Final Operations Report – Cameron H-58 (ACW-2022-SOG-J-04-WID 2034)**

ELM Inc, acting on behalf of Alvarez & Marsal Canada Inc in their capacity as the receiver for Strategic Oil and Gas Ltd submits the following documents as part of the final reporting for this well.

1. Well Termination Record
2. Morning Reports
3. Final well schematic
4. Wellhead schematic
5. Perforating logs (sent as separate email attachments)

As per term 15 of the well approval, this well requires gas migration testing in the frost free months of 2023 to determine if the remedial work carried out has repaired the gas migration. ELM and Alvarez & Marsal will organize the gas migration testing and inform OROGO as required. Depending on the results of the gas migration testing, the well will either need additional work, or can be cut and capped.

Should you have any questions or require further information, please contact the undersigned at  
[christopher@elminc.ca](mailto:christopher@elminc.ca)

Sincerely,

Christopher Gagnon, EIT

ELM Inc, acting as a consultant to Alvarez & Marsal Canada Inc

## WELL TERMINATION RECORD

**INSTRUCTIONS:**

1. Complete both pages.
2. Send one electronic copy of this form and supporting technical documentation by email to [orogo@gov.nt.ca](mailto:orogo@gov.nt.ca). If you wish to communicate with OROGO in hard copy, please do so using the courier address found at [www.orogo.gov.nt.ca](http://www.orogo.gov.nt.ca).

**WELL INFORMATION**

## DAILY REPORT

CLIENT:	Strategic Oil & Gas C/O Alvarez & Marsal	DATE:	February 16, 2023
UWI:	300/J-04 60-10N 117-30W	Report #:	1
PROJECT MANAGER:	Christopher Gagnon	AFE #:	

Proj # / AFE / Job Number:	STRA050	AFE Amount:	\$182,628.60	\$293,122.17
Project Descriptor: Well Abandonments				

Cost Coding	Surface Location	60.058770, -117.514690	AREA	Cameron Hills NWT
	License	2034		

### EXECUTIVE SUMMARY:

NWT App: ACW-2022-SOG-J-04-WID 2034

Day 1: Complete CBL log

Day 2: Chat log

Day 3: Noise / Temp log

Day 4: Move in service rig and related equipment. Start rigging in equipment.

Day 5: Finished rigging in service rig. Pressure tested and rigged in class III BOP stack. Ran in and perforated Sulphur Point. Conducted feedrate and ran in well with open ended tubing.

Day 6: Continued running in the well with 73.0 mm tubing and spotted below Sulphur Point perforations. Moved in cementing equipment and completed squeeze.

Day 7: Tagged cement top and located hole in the casing and pressure tested the cement plug.

Day 8: Perforated the Slave Point, conducted feedrate and ran retainer

Day 9: Move in cement unit and complete retainer squeeze. Pulled 4-joints of tubing and completed backwash. Pulled tubing from the well.

Day 10: Perforated the Wabamum and completed braidenhead squeeze to cover, both the hole at 566.0 mKB and Wabamum zone.

Day 11: Pressure tested wellbore to 7.0 MPa and held for 15-minutes. Tagged the cement top at 443.10 mKB. Laid out tubing and rigged out the service rig and related equipment.

Time	Well Abandonments
06:30	Traveled to location, serviced, and started equipment. -26 slight breeze
07:00	Complete LEL sweeps, visual wellsite inspection. Held pre-job safety meeting, reviewed safe work permits, fire and explosion. discussed emergency response and transportation plans. Topics included but not limited to, overhead loads, swing hazards, rigging in equipment, line of fire, moving equipment on location, use spotters, icy surfaces, pumping, tripping tubing, and trip hazards.
07:15	Recorded pressures SICP - 0, SITP N/A H2s - 0
07:30	Moved on Energetic tank truck loaded with 20.0 m3 of fresh water and off-loaded into the rig tank.
07:45	Stood mast on the service rig.
08:15	Stump tested class III BOP stack, pressure tested the blind rams, safety valve, spool valve, surface lines and manifold to 1.4 low and 21.0 MPa high and held pressure for 10-minutes each test. Installed 1.85 m pup into the stump and pressure tested the pipe rams to 1.4 MPa low and 21.0 MPa high and held pressure for 10-minutes each test. Removed the top section of the wellhead, installed tubing hanger complete with 1.85 m pup, stripped on BOP stack and tighten down bolts. Pressure tested the pipe rams to 1.4 MPa low and 21.0 MPa high and held pressure for 10-minutes. Remove the tubing hanger and pup. Pressure tested casing to 7.0 mPa and held for 15-minutes. Bled off.
10:00	Moved in Titanium Wireline, held pre-job safety meeting, issued safe work permit, built hazard assessment and reviewed emergency response plan. Spotted the wireline unit, rigged in 7-1/16 flange, BOPs and perforating gun. Made up run in the well with a 1.0 meter. 86 mm, 25 gram, 17 shot per/meter 60-degree perforating gun, logged gun into position and perforated from 1394.0 - 1395.0 mKB. Pulled spent gun from the well. Laid out on the ground. All shots fired. Rig out wireline and release to Camp.
14:00	Tied pump line into working spool and with blind rams closed conducted feed rate on Sulphur Point, pumped up to 7, 8, 9, 10, 11, 12 MPa with no bleed off, slowly increased pressure to 13.0 MPa and monitored pressure, well slowly bled off to 12.0 MPa in 2:40, pumped pressure back up to 13.0 MPa and well bled down to 12.0 MPa in a time of 2:30. Continued process 10 more times averaging 4.5 minutes to bleed down to 12.0 MPa. Reported data to Calgary contact.
17:15	Ran in the well open ended with 73.0 mm tubing off the ground. Ran 66-joints and pulled 5-joints. Secured the well for the night. Winterized and fueled equipment.
19:30	SDFN

Time	Well Abandonments
06:30	Traveled to location, serviced, and started equipment. -26 slight breeze
07:00	Complete LEL sweeps, visual wellsite inspection. Held pre-job safety meeting, reviewed safe work permits, fire and explosion. discussed emergency response and transportation plans. Topics included but not limited to, overhead loads, swing hazards, rigging in equipment, mixing and pumping cement, line of fire, moving equipment on location, use spotters, icy surfaces, pumping, tripping tubing, and trip hazards.
07:15	Recorded pressures SICP - 0, SITP N/A H2s - 0
07:30	Heated up BOP's and pump manifold and sucked back with the rig pump. Continued tripping in the well with 73.0 mm tubing, spaced out and landed below Sulphur Point remedial perforations.
12:00	Moved in CalPin cement pumper, bulker, vacuum truck and Pinnacle water truck. Held pre-job safety meeting, issued safe work permit, reviewed emergency response plan and built CalPin hazard assessment.
12:30	Rigged in equipment, completed feed rate, pressured up to 13.0 MPa with fresh water and observed bled off down to 12 MPa in 2.5 minutes, pumped up a second time and each time it took 30-liters of water each time.
13:30	Mixed up 0.6 m3 of 1901m/kg cement slurry with 4 hour setting time, pumped cement followed by 3.9 m3 of fresh water down the tubing, holding 2000 kPa back pressure and balanced the cement plug. Broke off cement pumper surface lines and pulled 5-joints of tubing and parked at 1348.5 mKB. Backwashed 6.0 m3 back to the rig tank, catching 20-liters of slurry at the rig tank. Pulled an additional 5-joints of tubing.
14:30	Rigged in the cement pumper into the tubing and pressured up the wellbore, pumped 134 liters to get up to 13.0 MPa, waited 7-minutes and bumped back up to 13.0 MPa pumping 42 liters of cement, hesitated for 11-minutes and pressure dropped to 7.5 MPa, bumped back up to 13.0 MPa with 56 litres of cement, hesitated for 13-minutes and pressure dropped down to 8.1 MPa, bumped up to 13.0 MPa with 50 liters of cement, pressure dropped to 8.1 MPa in 10-minutes. Hesitated for 20-minutes, pressure down to 5200 kPa, bumped up with 70-liters to 13.0 MPa, hesitated for 40-minutes the pressure dropped to 3.0 MPa, bumped up to 13.0 MPa, pumping 97 liters and held for 40 minutes, bumped to 7.0 MPa with 50 liters and hesitated for 15-minutes, bled down to 3.0 MPa, bumped up to 7.0 MPa with 50 liters and hesitated, pressure dropped to 4.0 Mpa in 15-minutes, increased to 7.0 Mpa with 40-liters and hesitated, bled to 4.0 Mpa in ten minutes and secured the well. Squeezed 505-liters of slurry into the zone.
19:00	6 hours and the cement characteristics have not changed. Still wet cement. Rigged out CalPin cement unit, vacuum truck and water hauler.

Time	Well Abandonments
06:30	Traveled to location, serviced, and started equipment. -26 slight breeze
07:00	Complete LEL sweeps, visual wellsight inspection. Held pre-job safety meeting, reviewed safe work permits, fire and explosion. discussed emergency response and transportation plans. Topics included but not limited to, overhead loads, swing hazards, rigging in equipment, tripping tubing, line of fire, moving equipment on location, use spotters, icy surfaces, pumping, tripping tubing, and trip hazards.
07:30	Recorded pressures SICP - 0, SITP N/A H2s - 0
07:45	Heated up BOP's and pump manifold and sucked back with the rig pump and ran in the well with tubing, tagged cement top at 1363.80 mKB, tagged 4-times, placing 2-dAN weight on the cement top. 201 liters of cement into the zone. Rigged in the pump line and pressure tested the wellbore to 7.0 MPa and held for 15-minutes, pressure decreased to 5.2 MPa proceeded to pressure up 3-different times with the same result.
09:45	Pulled out of the well with 143-joints of 73.0 mm tubing. Made up 139.7 mm DG packer and run in the well to 496.86 mKB of tubing, set packer and pressure tested to 7.0 MPa down the annulus and held the pressure for 15-minutes. Unset packer and continued to run in the well with tubing, set packer at 1005.47 mKB, pressure tested down the annulus and obtained a failed pressure test. Tied the pump line into the tubing and pressure tested from 1005.47 mKB to 1363.80 mKB and held a test of 7.0 MPa for 15-minutes. Pulled tubing and set packer at 800.5 mKB, pressure tested down the annulus and had a failed test, bled from 7.0 MPa to 5.0 MPa in 10-minutes. Pulled tubing to 553.5 mKB, pressure tested down the annulus and obtained a 7.0 MPa pressure test, ran in and set the packer at 562.8 mKB, pressure tested down the annulus and acquired a 7.0 MPa pressure test for 15-minutes. ran in then well with 5-stand of tubing and set packer at 648.75 mKB, failed pressure test, pulled 2-joints, set packer at 629.87 mKB and also had a failed test, pulled up to 611.02, 591.95 and 572.78 mKB and all three tests failed. Pulled up to 568.0 mKB we had 7.0 MPa, 15-minute pressure test. Hole between 568.0 - 563.37 mKB. External packer is set at 566.86 mKB. Bleed off pressure.
16:45	Notified Calgary contact, the location of the casing hole.
17:00	Latched onto 73.0 mm tubing and pulled from the well and stood in the derrick. Secured and bull plugged the well.
	Winterized and fueled equipment.
18:30	SDFN
	NOTE: re did calculations and changed the volume into formation.

Time	Well Abandonments
10:00	Travelled to location, serviced, and started equipment. -22 slight breeze
10:30	Complete LEL sweeps, visual wellsite inspection. Held pre-job safety meeting, reviewed safe work permits, fire and explosion. discussed emergency response and transportation plans. Topics included but not limited to, overhead loads, swing hazards, rigging in equipment, tripping tubing, line of fire, moving equipment on location, use spotters, icy surfaces, pumping, tripping tubing, and trip hazards.
11:00	Recorded pressures SICP - 0, SITP N/A H2s - 0
11:05	Received approval from OROGO to perforate the Slave Point.
11:30	Moved in Titanium Wireline unit, spotted truck and held pre-job safety meeting, issued safe work permit and built Titanium hazard assessment. Discussed arming perforating gun, all devices to be shut off, stay clear from moving shives and wireline, good communication and watch footing when tailing in the lubricator.
12:00	Ran in the well with 1-meter ERHSC perforating gun loaded with 25-gram 17 shot per meter 60 degree phasing, ran in the well, logged in to position and gun had a short. Held tailgate meeting, shut off all devices and pulled gun from the well and repaired the short in the safety. Soft tag with gun at 1352.0 mKB, suspect there is residual cement on casing walls.
12:45	Ran in the well with 1-meter ERHSC perforating gun loaded with 25-gram 17 shot per meter 60 degree phasing, ran in the well, logged in to position and gun had a short. Held tailgate meeting, shut off all devices and pulled gun from the well and repaired the short. different issues from the first.
13:30	Ran in the well with 1-meter ERHSC perforating gun loaded with 25-gram 17 shot per meter 60 degree phasing, ran in the well, logged in to position and perforated from 1344.5 - 1345.5 mKB. Pulled gun and inspected. all shots fired. Rigged and released wireline unit.
14:30	Filled the well with 1.0 m³ of fresh water, pressured the well up to 7, 8, 9, 10, 11 MPa and monitored for 5-minutes. No bleed off or feed rate. Bleed off the pressure and prepared to run the packer in the well.
15:30	Hoisted packer to the rig floor, made up on 1.9 m pup, ran in the well on 73.0 mm tubing down below external casing packer, set the tubing packer at 591.95 mKB. Rigged in pump line and pumped down the tubing, injecting into the Slave Point remedial perforations, with a rate of 140 litres per/min at 10.0 MPa pressure. Lowered pressure to 9.0 MPa and obtained a feed rate of 75 litres per/min. Stopped pump and well bled down to 8.0 MPa in 5-minutes.
16:30	Unset the packer, pulled 62-joints of tubing and laid out the packer. Picked up a 10 K permanent mechanical retainer and ran in the well on 73.0 mm tubing, parked retainer at 1336.82 mKB. Set retainer at 1336.05 mKB using 4.77 m wireline correction. Pressure tested the annulus to 7.0 MPa. Tied pump line into the tubing and completed pressure test, lowered the stinger into, opening the retainer and conducted feed rate. 140 liters per/min with 10.0 MPa pressure.
17:00	Secured the well. Winterized and fueled the equipment.
17:30	SDFN

Time	Well Abandonments
06:30	Traveled to location, serviced, and started equipment. -22 slight breeze
07:00	Complete LEL sweeps, visual wellsight inspection. Held pre-job safety meeting, reviewed safe work permits, fire and explosion. discussed emergency response and transportation plans. Topics included but not limited to, overhead loads, swing hazards, rigging in equipment, wirelining, tripping tubing, line of fire, cement pumping, moving equipment on location, use spotters, Icy surfaces, pumping, tripping tubing, and trip hazards.
07:30	Recorded pressures SICP - 0, SITP N/A H2s - 0
07:45	Warmed up pump and the wellhead. Rigged in the pump lines, pumped 300 liters of water, pressure tested the casing to 7.0 MPa and held the pressure for 10-minutes. Bled off pressure and set the pump for sucking back.
08:15	Picked up and ran in the well with 48-joints of tubing, tagged cement top at 443.10 mKB. Pulled and laid out the tubing on the ground. Rigged out the tripping equipment and the rig floor.
10:30	Stripped off the class III BOPs and installed top section and bolted down. Rigged out service rig and related equipment.
13:00	Prepared to move to the next location.  Based on tag point 4.28 m3 of cement was squeezed into perfs / casing failure.  <b>DO NOT CUT AND CAP WELL. FURTHER GAS MIGRATION TESTING IS REQUIRED.</b>
